

Fuel for Thought

...from Across the Seas

This week, we had the pleasure of hosting a group of undergraduate engineering students from Purdue University in Indiana USA.

Bruce Andersen
Site Superintendent,
QER

They were a nice group of young people. As is the case with most people who've had a look at our plant and visitors centre, the feedback was very positive. They were grateful for the opportunity to learn about, not only QER's kerogen fuel production process, but also about the looming need for new sources of transport fuel as the world's consumption of transport fuel continues to grow, and oil reserves continue to deplete.

As I looked around that young and enthusiastic group, I was reminded that our project is really all about the generations to come. As one of QER's owners once told us, he didn't want to have to look his children in the eye when they grow up and explain to them why our generation had used up the world's resources and didn't do anything about replacing them. We want the next generation to have the same or better opportunities than we had, and we hope that one day, fuel produced from our plant here in Gladstone as an important part of Australia's fuel mix, will help to make that possible.

The Purdue students travelled from the other side of the world to check out our site (among other things!) If you're interested in finding out more about QER's work and our future plans, it's a lot closer for you! Visiting hours and other details are outlined below. We'd love to see you soon.

Students from Purdue University, Indiana, visiting QER's New Fuels Development Centre earlier this week.

Creating new fuels for Australia
