

Fuel for Thought

Up Boat Creek

Some members of QER's Retort Feed Test Unit (RFTU) Operations team recently took some time out to work on the Boat Creek Rehabilitation Project.

QER has participated in this community project for several years. It is organised by the Capricornia Catchments Inc and supported by government and a number of Gladstone industries.

The project involves rehabilitation of the banks of the creek with native species to improve biodiversity and minimise erosion. It is one of many similar projects which together help reduce the sediment load in runoff, keep our waterways clean and ultimately help improve the health of the Great Barrier Reef.

It's heartening to see industry, community and government working together to help achieve those important goals. QER is proud to be part of that effort.

Bruce Andersen
Site Superintendent,
QER

QER's Mark Wooler, Dwayne Johnson and Lachlan Clements participating in the Boat Creek Rehabilitation Project.
